Amendments to the Abstract

A reinforced apparatus for a lever handle of a door lock comprises a housing having a first bottom plate and a second bottom plate, in which the first bottom plate connects a first annular wall and a second annular wall, and the second bottom plate connects the second annular wall and a third annular wall; a recess formed between the first annular wall and the second annular wall, ~~and formed with at least one protruding rib; and~~ a rotary member ~~including a first side plate and a second side plate, in which a coiled spring is disposed between [[the]] a first and a second side plates of the rotary member, and has two legs respectively engaging the protruding portion of the housing; characterized in that:~~ wherein the second bottom plate of the housing is formed with an axially extending predetermined bending member to be bent inwardly ~~by an auxiliary apparatus~~ for a predetermined angle, after the rotary member and the coiled spring are disposed within the recess of the housing, so that the rotary member is maintained within the recess of the housing and can be operated externally.
